

## **WEEKLY NEW BRUNSWICK INFLUENZA REPORT**

**Reporting period: February 24 to March 2 2013 (week 9)**

### **Summary**

#### **In New Brunswick, decrease on influenza activity since week 4 and 5**

##### **New Brunswick:**

- There have been 43 positive influenza detections during week 9 (9% decrease from previous week), 28 influenza A (H3), 7 influenza A (H1N1)pdm09, 7 influenza A (unsubtyped) and 1 influenza B.
- The ILI consultation rate remained stable compared to previous week and was below the expected range for this time of year.
- Continued decrease since week 4 in the number of reported ILI and influenza-confirmed outbreaks; 1 in a Nursing Home.

##### **Canada:**

- The number of regions reporting widespread or localized activity, as well as the ILI consultation rate continued to decline. Detections of influenza A and B increased slightly, primarily in Eastern Canada. The proportion of positive tests for influenza B has increased in recent weeks.
- 793 laboratory detections of influenza were reported, proportion of positive tests was 14.9%.
- The ILI consultation rate decreased and is below the expected level for this time of year. 31 influenza outbreaks were reported: 21 in long-term care facilities, 3 in hospitals and 7 in other settings.

##### **International:**

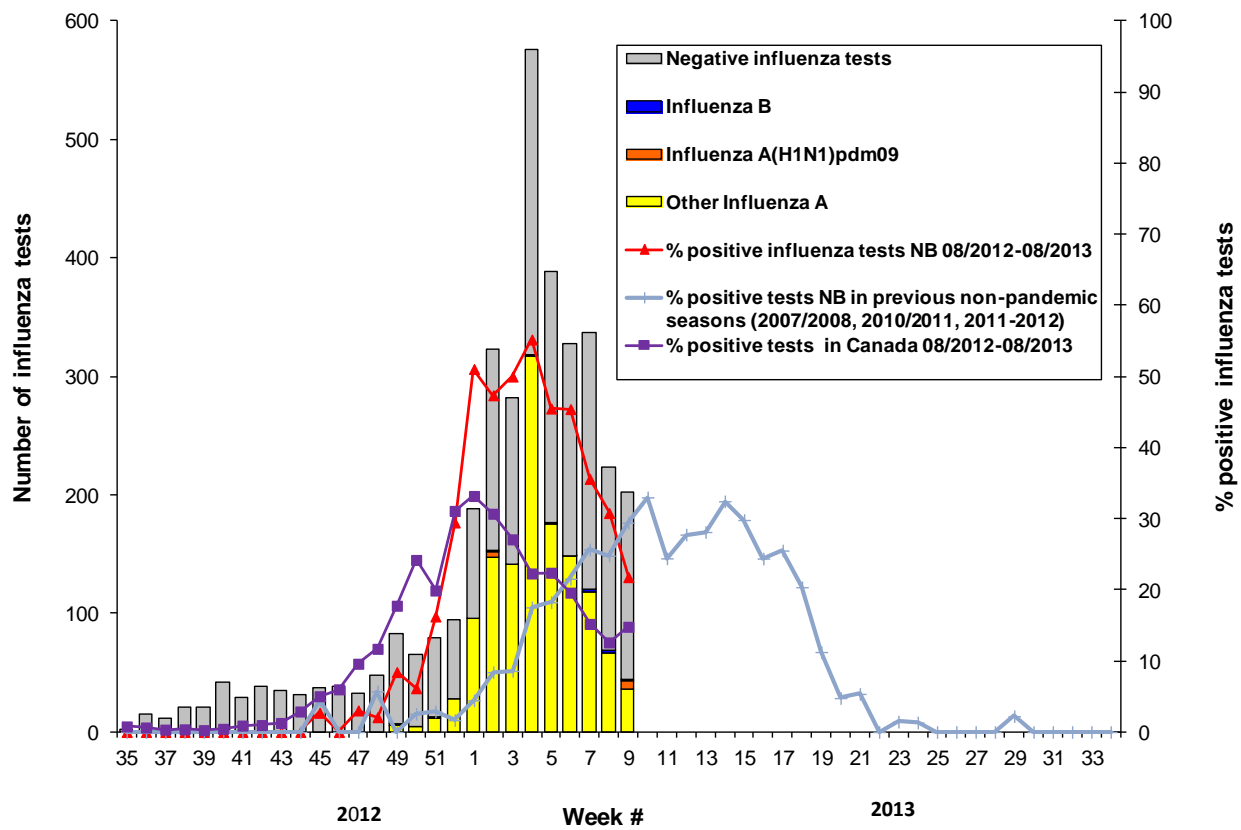

- On March 6 2013, one new confirmed case of human infection with a novel coronavirus (NCoV) was reported (from Saudi Arabia). The patient was hospitalized and died. Preliminary investigation indicated that the patient had no contact with previously reported cases of NCoV and did not have recent history of travel. From September 2012 to date, 14 reports have been received of human infections with a novel coronavirus, 7 from Saudi Arabia, 2 from Qatar, 2 from Jordan and 3 from United Kingdom. There have been 8 fatal cases. Investigation is continuing in order to identify the source, the route of transmission and changes with the virus.

#### **1) Influenza Laboratory Data<sup>1</sup>**

- A 9% decrease in percent positive laboratory results compared to previous week.
- 43 influenza detections were reported during that period.
- Since the beginning of the season, 1321 positive influenza detections have been reported, 14 influenza A (H1N1)pdm09, 406 influenza A (H3) viruses, 891 influenza A (unsubtyped) and 10 influenza B.

<sup>1</sup> Surveillance specimens are submitted by recruited New Brunswick Sentinel Practitioner Influenza Network (NB SPIN) practitioners, which are comprised of 8 sites in Emergency Rooms, 5 sites in Family Practice, 3 sites in First Nations communities, 1 site in a Nursing Home, 3 sites in Universities and 8 sites in Community Health Centers. Diagnostic specimens are submitted by physicians in the community/hospital setting. Influenza laboratory data is comprised of results from surveillance and diagnostic specimens. All laboratory specimens are tested using a real-time PCR assay, which is a rapid detection method designed for detection of all known variants of influenza A and B. All laboratory-confirmed cases are reported for the week when laboratory confirmation was received.

## 2) ILI Consultation Rates<sup>3</sup>

- During week 9, the ILI consultation rate was 19.5 consultations per 1,000 patient visits, and was below the expected levels for this time of year.
- During week 9, the sentinel response rate was 50% for both the FluWatch sentinel physicians and the NB SPIN practitioners.

Graph 2: ILI Consultation Rates in New Brunswick, by report week, season 2012/13 compared to previous seasons\*

\* The mean rate was based on data from the 1996/97 to 2011/2012 seasons and excludes the Pandemic season (2009-2010).

<sup>3</sup> A total of 38 practitioner sites (20 FluWatch sentinel physicians and 18 NB SPIN sites) are recruited this season to report the number of ILI patients and total patient consultations one day during a reporting week.

### 3) ILI and Laboratory-Confirmed Outbreak Data

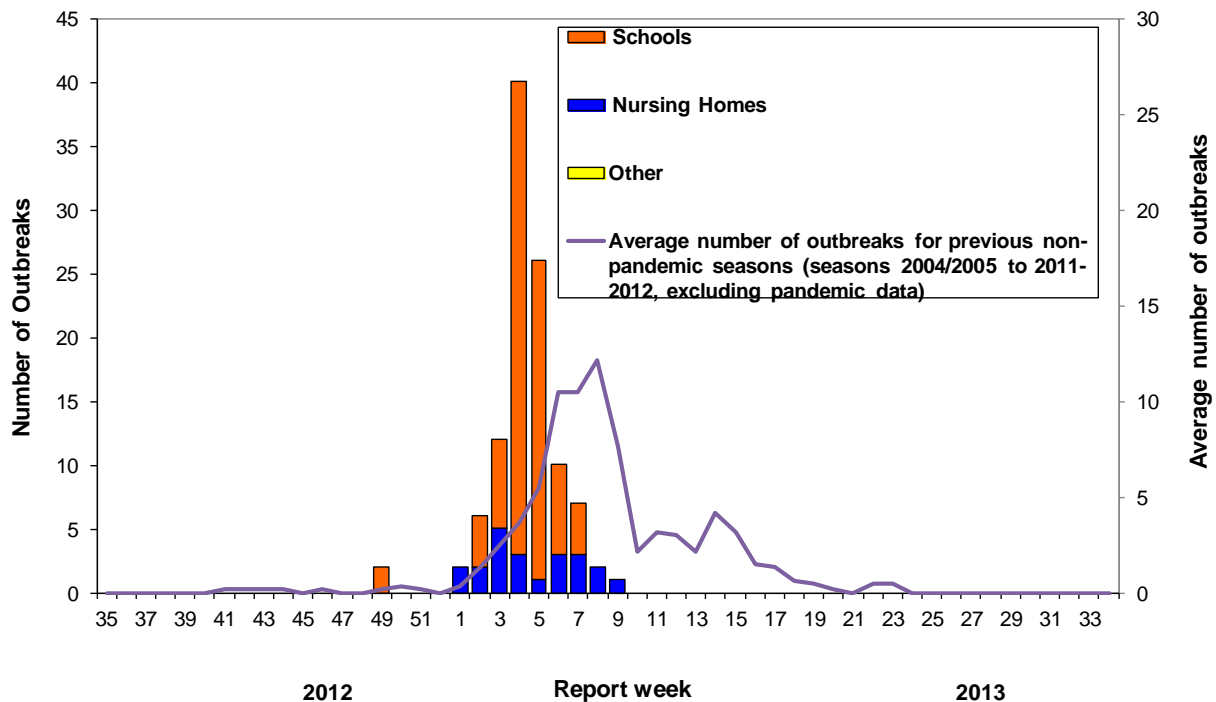

Table 2: ILI activity/outbreaks in New Brunswick nursing homes and schools for the reporting week, current and previous seasons.

	Reporting period: February/24/2012 –March/02/2013			Cumulative # of outbreaks season 2012-2013	Cumulative # of outbreaks season 2011-2012
	Lab-confirmed outbreaks in Nursing Homes*	Schools reporting ILI outbreaks**	Lab-confirmed outbreaks in Other Settings*		
Region 1	0 out of 13	0 out of 74	0	14	4
Region 2	0 out of 15	0 out of 81	0	36	6
Region 3	1 out of 14	0 out of 95	0	19	8
Region 4	0 out of 6	0 out of 22	0	2	2
Region 5	0 out of 2	0 out of 18	0	6	7
Region 6	0 out of 9	0 out of 35	0	21	2
Region 7	0 out of 4	0 out of 27	0	10	2
Total NB	1 out of 63	0 out of 352	0	108	31

\*Two or more ILI cases within a seven day period, including at least one laboratory-confirmed case of influenza. Outbreaks are reported in the week when laboratory confirmation is received.

\*\*Schools reporting greater than 10% absenteeism (or absenteeism that is higher (e.g. >5-10%) than expected level as determined by school or Public Health Authority) which is likely due to ILI.

**Graph 3: Number of Influenza Outbreaks in Nursing Homes<sup>1</sup> and ILI Outbreaks in Schools<sup>2</sup> reported to Public Health in New Brunswick, by report week, season 2012/13.**

<sup>1</sup> The National FluWatch definition of an outbreak in a nursing home is stated as two or more cases of ILI within a seven-day period, including at least one laboratory confirmed case.

<sup>2</sup> The National FluWatch definition of an ILI outbreak in a school is stated as absenteeism greater than 10% (or absenteeism that is higher (e.g.>5-10%) than expected level as determined by school or Public Health Authority) which is likely due to ILI.
